OFFLINE BROWSER PROTOTYPE

Wishlist Studio

Import a CSV, then search product names and filter the list by category.

QUICK START

Open: Repository README

Run locally:

```
Open index.html directly in a browser
```

Next: No install or network connection is needed for the static demo.

YOUR FIRST SESSION

01 The screen starts with three illustrative items; these names and prices are examples.

02 Prepare a CSV with the exact headers: product name, category, current price.

03 Use Upload Wishlist or paste the CSV and choose Import pasted CSV. Import replaces the current in-memory list.

04 Search by product name and enter a category to filter. Clear either field to broaden results.

05 The separate Node and SQLite workspace scaffold can be started with npm start; it is not connected to this browser demo.

DATA AND PRIVACY

The static demo keeps imported rows in browser memory. Reloading returns to sample data. Prices are entered manually.

LIMITS TO KEEP IN MIND

There is no Amazon sign-in, wishlist sync, deal monitoring, live pricing or automatic sale-event filter. The current category filter is text search.
